Core Values

Client focused delivery:

At QSEAP, we are committed to partnering with our clients to deliver true satisfaction. We work as members of the client's team, to understand their business and technological issues and to make those issues our own. This commitment permits us to be extremely agile and responsive to our Customer's needs.

Excellence:

We are committed to deliver our products and services with high level of excellence. All our processes are iterative in nature, ensuring our never ending strive for excellence and setting ever-higher standards to achieve.

Innovation:

We encourage innovative thinking and creative solutions from our employees that allow us to deliver the best value to our clients.

Integrity:

We are committed to operate our business with honesty, integrity and the highest level of ethical and legal standards. We value open and honest communications and are committed to doing the right thing for our clients.

Green IT

Creating sustainable business practices is becoming an increasingly critical function in today's organizations. With the rapid run up of energy costs and a broadening awareness of the impact of global climate change, IT organizations are looking for strategies to offset rising costs and to use technology in ways that reduce their environmental impact. With the growing body of evidence demonstrating the potential return on investment (ROI) resulting from adopting Green IT approaches the need for sustainability is rapidly increasing.

'Green IT' is not a separate agenda; it's a synonym for 'Effective IT'. It's a tool for achieving business and environmental objectives simultaneously. The same IT tools you use to make your organization more competitive and efficient, can also help you become environmentally sustainable.

IT reaches into every corner of your organization. Green IT is the same. It's not (just) about making IT itself efficient and environmentally sustainable; it's about using IT to make the rest of your organization efficient and environmentally sustainable. While IT contributes directly to only some 2% of the world's carbon emissions, it is the one function in your organization that can have a significant effect on the emissions of every other part of your operations. A 2008 report by The Climate Group on behalf of the Global e-Sustainability Initiative (GeSI) estimates that IT can reduce total global emissions by 15% by the year 2020.

Going Green with Qseap

Qseap offers "Green" IT services related to strategy and assessment, planning and implementation. This includes formulating an overall approach to Green IT. We offer the Client a complete introspection into their Platform, Network and Office.

Why Qseap?

- We are committed to provide high quality products and services with cost-effective designs and decisions.
- We are very serious about meeting deadlines, because we understand the value of time and its relation to business.
- Being relatively small - we can offer more ease, greater accountability and responsiveness to our customers we work with. Our size also helps us to avoid the bureaucratic inertia, typical to any big organization. Because of our small size and flexibility, we are able to help our customers react quickly to changing market conditions in comparison to their competitors.

Adding Qseap's services would help you to:

- Earn an edge over other competitors in the market.
- Identify and address the needs of the customer in a quicker and better way.
- Make decisions in the most profitable manner.
